Announcement

15th January 2010

Bulago Exploration Program Update

Frontier Resources Ltd announces a progress update for the recently completed high-grade gold and skarn exploration program at EL 1595 - Bulago in Papua New Guinea (figure 1).

Frontier is continuing negotiations with possible Joint Venture partners for Bulago and other PNG projects.

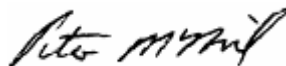

Approximately 1,600 soils, 349 rocks and 164 trench channel samples were collected during the program. Photo 1 shows the geological team at the re-located 1.4m of 55g/t gold outcrop and photo 2 shows the sub-vertical and sub-horizontal aspects of the mineralisation.

The program was terminated early in December due to weather conditions on site, resulting in less soil sample coverage than intended.

The first rock sample assays from the Suguma Prospect are now expected to be announced in late January, with trench and soil assays released subsequently when returned from the laboratory. This delay is due to sample shipment issues.

For additional information relating to the Bulago Project or Frontier Resources Ltd, please see the ASX releases dated 2/9/2008, 11/9/2009 and 23/11/2009, visit our website at www.frontierresources.com.au or feel free contact me.
